CHAPTER 24 · THE EXAM ARSENAL

Question Bank & Mock Exams

A complete practice set split the way the licence itself is examined: Part 1 — the written multiple-choice paper — and Part 2 — the oral/viva and practical R/T exam. Every question is compiled from real memory-based DGCA RTR(A) papers, cleaned, audited against current ICAO standards, and organised.

Join live classes for guided practice and doubt clearing.

PART 1: Multiple-Choice Examination (418 Questions)

General

1. ICAO was created by which international convention?

A. Warsaw Convention

B. Geneva Convention

C. Chicago Convention

Correct Answer: C

GHOST AVIATOR

GHOST AVIATOR

Join live classes for guided practice and doubt clearing.

2. On which date was the Chicago Convention signed, leading to the creation of ICAO?

A. 7th December 1944

B. 4th April 1944

C. 1st January 1945

Correct Answer: A

GHOST AVIATOR

3. When did the Chicago Convention come into existence (become effective)?

A. 7th December 1944

B. 4th April 1947

C. 30th June 1945

Correct Answer: B

GHOST AVIATOR

4. Where is the headquarters of ICAO located?

A. Geneva, Switzerland

B. Montreal, Quebec, Canada

C. New York, USA

Correct Answer: B

GHOST AVIATOR

5. ICAO mainly develops which of the following to support global aviation safety?

A. Local airfield rules

B. Airport security codes

C. Standards and Recommended Practices (SARPs)

Correct Answer: C

GHOST AVIATOR

6. How many contracting states does ICAO currently have?

A. 172

B. 193

C. 205

Correct Answer: B

GHOST AVIATOR

7. How many regional offices does ICAO maintain?

A. 5

B. 9

C. 7

Correct Answer: C

GHOST AVIATOR

8. How many geographic regions are maintained under ICAO?

A. 6

B. 9

C. 12

Correct Answer: B

GHOST AVIATOR

9. Which of the following is NOT one of ICAO's geographic regions?

A. AFI – Africa-Indian Ocean

B. MID – Middle East

C. SEA – Southeast Asia

Correct Answer: C

GHOST AVIATOR

10. ICAO office responsible for India falls under which regional office?

A. AFI – Africa-Indian Ocean

B. Bangkok (Asia and Pacific region)

C. NAT – North Atlantic

Correct Answer: B

GHOST AVIATOR

11. Which ICAO body is responsible for adopting Standards and Recommended Practices (SARPs)?

A. ICAO Assembly only

B. ICAO Secretariat

C. ICAO Council

Correct Answer: C

GHOST AVIATOR

12. IATA is primarily known as what type of organization?

A. A government aviation regulator

B. A global trade organization for the air transport industry

C. A military aviation body

Correct Answer: B

GHOST AVIATOR

13. What is the main objective of IATA?

A. Conduct aircraft manufacturing

B. Manage airport operations worldwide

C. Promote safe, reliable, secure, and economical air services

Correct Answer: C

GHOST AVIATOR

14. What percentage of total global air traffic is approximately represented by IATA member airlines?

A. 70%

B. 85%

C. 83%

Correct Answer: C

GHOST AVIATOR

15. How many airlines are members of IATA?

A. 220

B. Over 370

C. 150

Correct Answer: B

GHOST AVIATOR

16. When was IATA founded?

A. 7th December 1944

B. 19th April 1945

C. 1st March 1946

Correct Answer: B

GHOST AVIATOR

17. Where was IATA founded?

A. Montreal, Canada

B. Geneva, Switzerland

C. Havana, Cuba

Correct Answer: C

GHOST AVIATOR

18. Where is the headquarters of IATA located?

A. Montreal, Quebec, Canada

B. New York, USA

C. London, United Kingdom

Correct Answer: A

GHOST AVIATOR

19. SARPs are issued by ICAO under which international agreement?

A. Warsaw Convention

B. Geneva Convention

C. Chicago Convention

Correct Answer: C

GHOST AVIATOR

20. Which ICAO body is responsible for adopting SARPs?

A. ICAO Assembly

B. ICAO Secretariat

C. ICAO Council

Correct Answer: C

GHOST AVIATOR

21. What does the acronym SARPs stand for?

A. Safety and Regulation Procedures

B. Standard Aviation Rule Policies

C. Standards and Recommended Practices

Correct Answer: C

GHOST AVIATOR

22. How many annexes currently contain ICAO SARPs?

A. 12

B. 19

C. 24

Correct Answer: B

GHOST AVIATOR

23. What is the primary purpose of SARPs?

A. To manage airline ticketing

B. To control airport finances

C. To ensure global uniformity in aviation standards

Correct Answer: C

GHOST AVIATOR

24. What defines a Standard in ICAO SARPs?

A. The word MAY

B. The word SHOULD

C. The word SHALL

Correct Answer: C

GHOST AVIATOR

25. Uniform application of SARPs is considered essential for what purpose?

A. Reducing aviation taxes

B. Ensuring safety and regularity of international air navigation

C. Promoting airline marketing practices

Correct Answer: B

GHOST AVIATOR

26. If a Contracting State cannot comply with a Standard, what must it do according to the Chicago Convention?

A. Cancel all international flights

B. Notify the ICAO Council as per Article 38

C. Request permission from member airlines

Correct Answer: B

GHOST AVIATOR

27. Which Article of the Chicago Convention requires States to inform ICAO about differences from Standards?

A. Article 26

B. Article 12

C. Article 38

GHOST AVIATOR

Correct Answer: C

Join live classes for guided practice and doubt clearing.

28. Which word is used in ICAO documents to define a Recommended Practice?

A. SHALL

B. SHOULD

C. MAY

Correct Answer: B

GHOST AVIATOR

29. Uniform application of Recommended Practices is considered what?

A. Legally mandatory

B. Not related to aviation safety

C. Desirable for the safety and regularity of international air navigation

Correct Answer: C

GHOST AVIATOR

30. What is a Contracting State expected to do regarding Recommended Practices?

A. Endeavour to conform to them

B. Strictly enforce them by law

C. Ignore them unless convenient

Correct Answer: A

GHOST AVIATOR

31. If a State does not comply with a Recommended Practice, what is required?

A. No compulsory notification to the ICAO Council

B. Mandatory report under Article 38

C. Cancellation of all operations

GHOST AVIATOR

Correct Answer: A

Join live classes for guided practice and doubt clearing.

32. Recommended Practices are considered desirable for what aspect?

A. Airline pricing

B. Domestic tourism

C. Supporting the safety and regularity of international air navigation

Correct Answer: C

GHOST AVIATOR

33. PANS-ATM (Doc 4444) is published by ICAO for what primary purpose?

A. To regulate aircraft manufacturing

B. To specify the operating procedures to be applied by air traffic services units

C. To train airport security staff

Correct Answer: B

GHOST AVIATOR

34. Why is PANS-ATM required in addition to Annex 11?

A. Annex 11 is outdated

B. Annex 11 applies only to domestic flights

C. Annex 11 is not detailed enough for ATS operations

Correct Answer: C

GHOST AVIATOR

35. PANS-ATM is primarily intended for which group?

A. Airline management teams

B. Aircraft dispatchers

C. Air Traffic Services (ATS) personnel

Correct Answer: C

GHOST AVIATOR

36. Who else, besides ATS personnel, should be familiar with sections of PANS-ATM relating to Air Traffic Management?

A. Airport ground handling staff

B. Flight crews

C. Maintenance engineers

Correct Answer: B

GHOST AVIATOR

37. PANS-ATM provides more detailed guidance than which ICAO Annex?

A. Annex 14

B. Annex 2

C. Annex 11

Correct Answer: C

GHOST AVIATOR

38. SUPPS are created when which of the following is necessary?

A. A State wants to publish its own national regulations

B. A specific region requires procedures different from worldwide procedures

C. Airlines request new route structures

Correct Answer: B

GHOST AVIATOR

39. Who determines the need for regional procedures that differ from global ones?

A. Individual State airlines

B. ICAO Assembly

C. Regional Air Navigation Meetings

Correct Answer: C

GHOST AVIATOR

40. SUPPS are approved for use in which areas?

A. Worldwide

B. Only within their respective geographic regions

C. Only within ICAO headquarters

Correct Answer: B

GHOST AVIATOR

41. The status of SUPPS is similar to which other ICAO document type?

A. Annexes

B. PANS (Procedures for Air Navigation Services)

C. Airworthiness Manuals

Correct Answer: B

GHOST AVIATOR

42. DGCA is primarily responsible for which area in Indian civil aviation?

A. Airport construction

B. Airline marketing

C. Aviation safety regulation

Correct Answer: C

GHOST AVIATOR

43. DGCA regulates air transport services operating where?

A. Only international flights

B. Only domestic flights

C. To/from/within/over India

Correct Answer: C

GHOST AVIATOR

44. Where is the headquarters of DGCA located?

A. Mumbai

B. Bengaluru

C. New Delhi

Correct Answer: C

GHOST AVIATOR

45. Which of the following is a key function of DGCA?

A. Manufacturing aircraft

B. Registration of civil aircraft

C. Setting fuel prices

Correct Answer: B

GHOST AVIATOR

46. DGCA is responsible for the licensing of which personnel?

A. Airport managers

B. Pilots, aircraft maintenance engineers, and flight engineers

C. Airline ground staff

Correct Answer: B

GHOST AVIATOR

47. Which aviation personnel licensing is also under DGCA's authority?

A. Cabin crew

B. Meteorologists

C. Air Traffic Controllers

Correct Answer: C

GHOST AVIATOR

48. DGCA certification of aerodromes includes which type of facilities?

A. Cargo warehouses

B. CNS/ATM facilities

C. Duty-free shops

Correct Answer: B

GHOST AVIATOR

49. DGCA regulates operations of flights belonging to which operators?

A. Only Indian operators

B. Only cargo operators

C. Both Indian and foreign operators

Correct Answer: C

GHOST AVIATOR

Join live classes for guided practice and doubt clearing.

50. DGCA coordinates flexi-use of airspace between which groups?

A. Airlines and passengers

B. Civil and military air traffic agencies

C. Travel agents and airlines

Correct Answer: B

GHOST AVIATOR

51. Monitoring aircraft noise and emissions falls under which ICAO Annex?

A. Annex 14

B. Annex 11

C. Annex 16

Correct Answer: C

GHOST AVIATOR

52. DGCA encourages indigenous design and manufacture of aircraft by acting as what?

A. A regulator

B. A catalytic agent

C. A sponsor

Correct Answer: B

GHOST AVIATOR

53. DGCA coordinates with ICAO mainly for what purpose?

A. Hiring foreign pilots

B. Provision of more air routes through Indian airspace

C. Approving airport uniforms

Correct Answer: B

GHOST AVIATOR

54. The International Telecommunication Union (ITU) operates under which global body?

A. European Union

B. Commonwealth Secretariat

C. United Nations Organization (UNO)

Correct Answer: C

GHOST AVIATOR

55. Where is the headquarters of ITU located?

A. Montreal, Canada

B. Vienna, Austria

C. Geneva, Switzerland

Correct Answer: C

GHOST AVIATOR

56. ITU was formed by combining which two earlier bodies?

A. ICAO + IATA

B. International Telegraph Union 1865 + International Radiotelegraph Convention 1906

C. WMO + IMO

Correct Answer: B

GHOST AVIATOR

57. In which year was the ITU officially established in its modern form?

A. 1954

B. 1934

C. 1984

Correct Answer: B

GHOST AVIATOR

58. India signed the ITU convention during which 1982 conference?

A. Geneva Conference 1971

B. WARC Conference 1967

C. 11th Nairobi Conference 1982

Correct Answer: C

GHOST AVIATOR

59. When did the 1982 ITU convention become effective for India?

A. 1st July 1982

B. 1st April 1983

C. 1st January 1984

Correct Answer: C

GHOST AVIATOR

60. How many volumes are ITU regulations divided into?

A. 2

B. 3

C. 4

Correct Answer: C

GHOST AVIATOR

61. Which of the following is NOT one of the ITU regulation volumes?

A. Articles

B. Resolutions

C. Manuals

Correct Answer: C

GHOST AVIATOR

62. Which ITU regulation volume contains items like Q-codes and emission classes?

A. Appendices

B. Resolutions

C. Recommendations

Correct Answer: A

GHOST AVIATOR

63. What is the primary purpose of ITU?

A. Regulating air traffic

B. Allocating radio spectrum and improving telecom efficiency

C. Granting aviation licenses

Correct Answer: B

GHOST AVIATOR

64. WRC stands for what?

A. World Aeronautical Regulatory Committee

B. Wireless Aviation Radio Council

C. World Radiocommunication Conference

Correct Answer: C

GHOST AVIATOR

65. What is the purpose of WARC?

A. To train pilots

B. To regulate airspace

C. To review global radio communication and ITU’s working

Correct Answer: C

GHOST AVIATOR

66. Which countries participate in WARC?

A. Only developed countries

B. Only ITU founders

C. All ITU member countries

Correct Answer: C

GHOST AVIATOR

67. Which ITU bureau handles radio communication matters?

A. ITU-T

B. ITU-D

C. ITU-R

Correct Answer: C

GHOST AVIATOR

68. ITU-T deals with which area?

A. Radio navigation

B. Telecommunication standards

C. Space tracking

Correct Answer: B

GHOST AVIATOR

69. ITU-D is responsible for what?

A. Dangerous goods regulations

B. Aviation safety development

C. Telecommunication development

Correct Answer: C

GHOST AVIATOR

70. When was the Airports Authority of India (AAI) formed?

A. 1st January 1989

B. 1st April 1995

C. 1st March 2000

Correct Answer: B

GHOST AVIATOR

71. AAI was formed by merging which two organizations?

A. DGCA + BCAS

B. Indian Airlines + Air India

C. International Airports Authority of India + National Airports Authority

Correct Answer: C

GHOST AVIATOR

72. Where is the headquarters of AAI located?

A. Mumbai

B. Kolkata

C. New Delhi

Correct Answer: C

GHOST AVIATOR

73. Which of the following is a major objective of forming AAI?

A. Training pilots

B. Monitoring aircraft noise

C. Integrated development and modernization of airports

Correct Answer: C

GHOST AVIATOR

74. AAI is responsible for the design and operation of which airports?

A. Only international airports

B. Only domestic airports

C. Both international and domestic airports

Correct Answer: C

GHOST AVIATOR

75. AAI manages Indian airspace extending beyond territorial limits as accepted by whom?

A. Ministry of Defence

B. ICAO

C. ISRO

Correct Answer: B

GHOST AVIATOR

76. Which of the following is included in AAI’s responsibilities?

A. Certification of aircraft

B. Airline financial auditing

C. Construction and management of passenger terminals

Correct Answer: C

GHOST AVIATOR

77. AAI is responsible for developing which type of terminals?

A. Railway cargo terminals

B. Cargo terminals at international and domestic airports

C. Shipping terminals

Correct Answer: B

GHOST AVIATOR

78. AAI expands and maintains which operational areas?

A. Cockpit instrumentation

B. Catering lounges

C. Runways, aprons, taxiways

Correct Answer: C

GHOST AVIATOR

79. Which visual aids are provided by AAI?

A. Flight management computers

B. Airport lighting systems and markings

C. Aircraft weather radars

Correct Answer: B

GHOST AVIATOR

80. Which area is NOT a responsibility of AAI?

A. Airport terminal development

B. Airspace management

C. Licensing of pilots

Correct Answer: C

GHOST AVIATOR

81. CARs are issued by DGCA under which legal authority?

A. Aircraft Act 1950

B. Aircraft Rules 1937

C. ICAO Annex 6

Correct Answer: B

GHOST AVIATOR

82. The primary purpose of CARs issued by DGCA is to—?

A. Replace ICAO Standards completely

B. Provide information on AFTN operations

C. Meet ICAO requirements and standardize aviation procedures

Correct Answer: C

GHOST AVIATOR

83. How many Sections are the CARs issued by DGCA divided into?

A. 5

B. 11

C. 21

Correct Answer: B

GHOST AVIATOR

84. CAR Section 2 deals with—?

A. Licensing of engineers

B. Airworthiness requirements

C. Dangerous goods transport

Correct Answer: B

GHOST AVIATOR

85. CAR Section 7 covers—?

A. Meteorology procedures

B. Flight crew standards, training, and licensing

C. Radio communication procedures

Correct Answer: B

GHOST AVIATOR

86. CARs are primarily intended to—?

A. Provide military aviation regulations

B. Provide technical specifications for airport construction

C. Ensure standardized civil aviation procedures in compliance with ICAO

Correct Answer: C

GHOST AVIATOR

87. Which DGCA document governs pilot licensing standards?

A. CAR Section 3

B. CAR Section 7

C. CAR Section 11

Correct Answer: B

GHOST AVIATOR

88. Which of the following is a responsibility covered under CAR Section 2?

A. Medical assessment of flight crew

B. Ensuring aircraft meet airworthiness and operational requirements

C. ATCO licensing

Correct Answer: B

GHOST AVIATOR

89. CARs are primarily applicable to—?

A. ATC only

B. Meteorological departments only

C. All civil aviation stakeholders including operators, pilots, AMEs, and ATC

Correct Answer: C

GHOST AVIATOR

90. Which ICAO Annex deals with the licensing of flight crew, ATCOs, and AMEs?

A. Annex 6

B. Annex 1

C. Annex 7

Correct Answer: B

GHOST AVIATOR

91. The Rules of the Air are contained in—?

A. Annex 12

B. Annex 2

C. Annex 10

Correct Answer: B

GHOST AVIATOR

92. Which Annex defines the Units of Measurement to be used in air and ground operations?

A. Annex 6

B. Annex 5

C. Annex 13

Correct Answer: B

GHOST AVIATOR

93. Aircraft Nationality and Registration Marks fall under—?

A. Annex 8

B. Annex 9

C. Annex 7

Correct Answer: C

GHOST AVIATOR

94. Which Annex defines the standards for Air Traffic Services (ATS)?

A. Annex 2

B. Annex 10

C. Annex 11

Correct Answer: C

GHOST AVIATOR

95. Standards for Aerodrome design and operation come from—?

A. Annex 15

B. Annex 14

C. Annex 7

Correct Answer: B

GHOST AVIATOR

96. Annex 10 mainly deals with which aspect of aviation?

A. Aerodrome design

B. Aircraft accident investigation

C. Aeronautical telecommunications

Correct Answer: C

GHOST AVIATOR

97. Which Annex 10 volume deals with actual airborne and ground communication systems (e.g., CPDLC, ACARS, SATCOM)?

A. Volume I

B. Volume III

C. Volume V

Correct Answer: B

GHOST AVIATOR

98. Which of the following systems is not covered under Annex 10 Volume I?

A. VOR

B. ILS

C. TCAS

Correct Answer: C

GHOST AVIATOR

99. CPDLC and ADS-C operational requirements appear under which Annex 10 volume?

A. Volume III

B. Volume II

C. Volume IV

Correct Answer: A

GHOST AVIATOR

100. Standard ELT battery endurance is

A. 12 hours

B. 24 hours

C. 48 hours

Correct Answer: C

GHOST AVIATOR

101. Which situation typically triggers an INCERFA?

A. Aircraft declares PAN-PAN

B. Aircraft fails to land within 5 minutes

C. No RT contact and aircraft overdue by more than 30 minutes

Correct Answer: C

GHOST AVIATOR

102. Which situation qualifies as DETRESFA?

A. Aircraft cannot establish initial contact

B. Fuel on board considered to be exhausted

C. Aircraft 10 minutes late in arrival

Correct Answer: B

GHOST AVIATOR

103. The 4-letter ICAO location indicator for Indian stations always begins with which letter?

A. M

B. K

C. V

Correct Answer: C

GHOST AVIATOR

104. What does the second letter of an ICAO location indicator represent?

A. AFSRA zone

B. Country / FIR

C. Station name

Correct Answer: B

GHOST AVIATOR

105. The last two letters of a 4-letter ICAO location indicator denote

A. FIR

B. Actual aerodrome/station

C. Chart identification

Correct Answer: B

GHOST AVIATOR

106. Which organization publishes AERADIO containing Indian location indicators?

A. DGCA

B. AAI

C. IATA

Correct Answer: B

GHOST AVIATOR

107. Location indicators are also published internationally in

A. ICAO Annex 10

B. ICAO Doc 7910

C. ICAO Doc 7030

Correct Answer: B

GHOST AVIATOR

108. India has been divided into how many aeronautical regions for location indicator purposes?

A. 3

B. 6

C. 4 (Mumbai, Kolkata, Delhi, Chennai)

Correct Answer: C

GHOST AVIATOR

109. Density altitude represents

A. The actual altitude of the aircraft

B. Altitude corrected for wind

C. The altitude in Standard Atmosphere corresponding to the observed density

Correct Answer: C

GHOST AVIATOR

110. High density altitude means

A. High air density and better aircraft performance

B. Low air density and reduced aircraft performance

C. Low altitude and high pressure

Correct Answer: B

GHOST AVIATOR

111. What is the maximum penalty for unauthorized use of radio communication equipment, as per the Indian Telegraph Act, 1885?

A. Fine up to $1,000

B. Imprisonment for up to 6 months or fine, or both.

C. Imprisonment for up to 3 years or fine, or both.

Correct Answer: C

GHOST AVIATOR

112. What is the ICAO standard pronunciation for the digit 9?

A. NINE

B. NINER

C. NINAH

Correct Answer: B

GHOST AVIATOR

113. What is the recommended range of speech rate (words per minute) for routine radio communication?

A. 50 to 80 words per minute

B. Not exceeding 100 words per minute

C. 120 to 150 words per minute

Correct Answer: B

GHOST AVIATOR

114. How are flight levels (FLs) above the Transition Altitude normally transmitted by radio?

A. In feet above mean sea level (MSL).

B. As the full number followed by 'THOUSAND FEET'.

C. As the words FLIGHT LEVEL followed by the individual digits.

Correct Answer: C

GHOST AVIATOR

AIS, Documents & Messaging

115. Why are standard words and phrases used in radiotelephony?

A. To save time

B. For formality

C. To eliminate ambiguity and misunderstanding

Correct Answer: C

GHOST AVIATOR

116. Regional Supplementary Procedures (SUPPS) are published in which ICAO document?

A. Doc 4444

B. Doc 7030/4

C. Doc 8168

Correct Answer: B

GHOST AVIATOR

117. What is the approval authority for Regional Supplementary Procedures (SUPPS)?

A. National aviation authorities

B. ICAO Secretariat

C. ICAO Council

GHOST AVIATOR

Correct Answer: C

118. SUPPS contain procedures that supplement which type of procedures?

A. Military procedures

B. Airport firefighting SOPs

C. Worldwide air navigation procedures

Correct Answer: C

GHOST AVIATOR

119. Which of the following publications is issued by AAI under Aeronautical Information Services (AIS)?

A. ATPL question paper

B. Aviation fuel circular

C. AIP, NOTAMs, AIRACs, PIBs

Correct Answer: C

GHOST AVIATOR

Join live classes for guided practice and doubt clearing.

120. What type of information is published in the Aeronautical Information Publication (AIP)?

A. Temporary and short-term information

B. Long-lasting information essential to air navigation

C. Real-time weather updates

Correct Answer: B

GHOST AVIATOR

121. Which document contains information that does NOT qualify for a NOTAM or inclusion in the AIP?

A. PIB

B. AIC

C. AIRAC

GHOST AVIATOR

Correct Answer: B

122. Which of the following best describes a NOTAM?

A. Regular updates of ATC staffing

B. Telecommunicated notice of any change in facility, service, or hazard

C. Annual publication of navigation charts

Correct Answer: B

GHOST AVIATOR

123. AIRAC is a system used for—?

A. Publishing daily weather forecasts

B. Emergency ATC coordination

C. Providing advance notice of significant changes on fixed common effective dates

Correct Answer: C

GHOST AVIATOR

124. What is the primary purpose of an AIC (Aeronautical Information Circular)?

A. To replace NOTAMs

B. To provide non-urgent information relating to safety, administrative, or technical matters

C. To publish time-sensitive NOTAMs

GHOST AVIATOR

Correct Answer: B

125. A NOTAM should be originated when the information—?

A. Has no operational significance

B. Can wait for the next AIC

C. Is critical and time-sensitive for flight operations

GHOST AVIATOR

Correct Answer: C

126. Aeronautical Information Services (AIS) is included in—?

A. Annex 4

B. Annex 3

C. Annex 15

Correct Answer: C

GHOST AVIATOR

127. What is the ICAO document number assigned to PANS-ATM?

A. Document 8168

B. Document 4444

C. Document 7300

Correct Answer: B

GHOST AVIATOR

128. What is the total number of ITU member states?

A. 160

B. 193

C. 205

Correct Answer: B

GHOST AVIATOR

129. Aircraft operating within, to, or through an ADIZ must obtain which clearance prior to departure?

A. ATC route clearance

B. Flight Information Clearance

C. Air Defence Clearance (ADC)

Correct Answer: C

GHOST AVIATOR

130. Communication Procedures including radiotelephony phraseology are contained in which volume of Annex 10?

A. Volume V

B. Volume II

C. Volume I

Correct Answer: B

GHOST AVIATOR

131. Standard radiotelephony phraseology used for all RT communication is published in which volume?

A. Volume II

B. Volume I

C. Volume V

GHOST AVIATOR

Correct Answer: A

132. What is the full pronunciation for the number 5 when transmitting a series of digits in aeronautical mobile service communications?

A. FIVE

B. FIFE

C. FIV

Correct Answer: B

GHOST AVIATOR

133. The time transmitted in the aeronautical mobile service should be given to the nearest

A. Hour

B. 10 minutes

C. Minute

GHOST AVIATOR

Correct Answer: C

134. The call sign of the ground station should normally appear at which point in a routine communication initiated by the aircraft?

A. It is stated only at the end of the transmission.

B. It is stated immediately following the aircraft's own call sign.

C. It is stated first, before the aircraft's own call sign.

Correct Answer: C

GHOST AVIATOR

135. Which of the following is the standard phraseology for saying 'Yes' or 'That is correct'?

A. ROGER

B. CONFIRM

C. AFFIRM

GHOST AVIATOR

Correct Answer: C

136. Which of the following ATC instructions are always mandatory readback items?

A. Frequency change instructions.

B. Taxi instructions.

C. Altitude and flight level instructions are always mandatory readback items.

Correct Answer: C

GHOST AVIATOR

137. What is the correct way to express the time 0930 Coordinated Universal Time (UTC) to a ground station?

A. ZERO NINER THREE ZERO ZULU

B. ZERO NINER THREE ZERO HOURS

C. TIME ZERO NINER THREE ZERO

GHOST AVIATOR

Correct Answer: C

138. What is the correct phraseology for requesting the magnetic heading to be flown to reach the station?

A. REQUEST QDR

B. REQUEST QDM

C. REQUEST QNH

Correct Answer: B

GHOST AVIATOR

139. When an aircraft's assigned altitude or flight level is not to be read back, what phraseology should the controller use?

A. ROGER

B. READBACK NOT REQUIRED

C. Altitude and flight level instructions are always mandatory readback items.

GHOST AVIATOR

Correct Answer: C

140. What is the standard ICAO phonetic word for the letter 'X'?

A. Xavier

B. X-ray

C. Xylophone

Correct Answer: B

GHOST AVIATOR

141. The procedural word (proword) used by an ATC unit to indicate a mistake has been made in the transmission and that the corrected version will follow immediately is

A. NEGAT

B. CORRECTION

C. ERROR

GHOST AVIATOR

Correct Answer: B

142. If an ATC unit transmits 'PASS YOUR MESSAGE', what does this request imply?

A. The aircraft should now change frequency.

B. The controller is ready to receive the full content of the previous message.

C. The aircraft should stand by and wait for instructions.

Correct Answer: B

GHOST AVIATOR

143. The safety signal SECURITÉ (spoken three times) has priority over which other class of message?

A. Distress messages (MAYDAY)

B. Urgency messages (PAN-PAN)

C. All other communications except distress and urgency.

GHOST AVIATOR

Correct Answer: C

144. What is the standard ICAO phonetic word for the number 3?

A. THREE

B. TREE

C. TREE

Correct Answer: C

GHOST AVIATOR

145. The phonetic spelling for the letter 'V' in the ICAO phonetic alphabet is

A. Vessel

B. Volta

C. Victor

Correct Answer: C

GHOST AVIATOR

146. What is the proper phraseology for transmitting the number '10,000' feet in a standard radio communication?

A. TEN THOUSAND

B. ONE ZERO ZERO ZERO ZERO FEET

C. ONE ZERO THOUSAND

Correct Answer: C

GHOST AVIATOR

147. What is the minimum required signal strength (readability) for a successful two-way radiotelephone communication in the aeronautical mobile service?

A. Readability 1 (Unreadable)

B. Readability 2 (Readable now and then)

C. Readability 3 (Readable, but with difficulty)

Correct Answer: C

GHOST AVIATOR

148. In a situation involving a fire onboard the aircraft that is NOT immediately life-threatening but requires urgent action, which signal should the pilot transmit before the message?

A. MAYDAY

B. EMERGENCY

C. PAN-PAN

GHOST AVIATOR

Correct Answer: C

149. If a ground station sends a message and receives no reply, what is the maximum number of times it may repeat the call sign of the station called, before giving the message 'TO ALL STATIONS'?

A. Once

B. Twice

GHOST AVIATOR

C. Three times

Correct Answer: C

150. When an Air Traffic Control (ATC) unit needs to cancel a previously issued clearance, which proword should they use to introduce the cancellation?

A. DISREGARD

B. CANCEL

C. NEGATIVE

Correct Answer: B

GHOST AVIATOR

151. What is the correct phraseology to indicate that the entire last message has been received and understood, and the instruction contained therein will be executed.

A. ROGER

B. AFFIRM

C. WILCO

GHOST AVIATOR

Correct Answer: C

152. According to the standard readability scale used in aeronautical radio communication, which rating signifies 'Readable but with difficulty'?

A. Readability 1

B. Readability 2

C. Readability 3

Correct Answer: C

GHOST AVIATOR

153. What time standard is mandatory for use in all aeronautical mobile service communications?

A. Local Time, specified by the controlling station.

B. Coordinated Universal Time (UTC), often referred to as 'Zulu' time.

C. Greenwich Mean Time (GMT).

GHOST AVIATOR

Correct Answer: B

154. Which procedural word (proword) is used by a radiotelephone operator to indicate that a separation is made between portions of a message?

A. OVER

B. BREAK

C. STANDBY

Correct Answer: B

GHOST AVIATOR

155. What is the highest precedence category for a message transmitted in the aeronautical mobile service?

A. Urgency messages, such as those concerning serious technical difficulties.

B. Safety messages, such as those relating to important flight conditions.

C. Distress messages, indicated by MAYDAY.

GHOST AVIATOR

Correct Answer: C

156. What is the primary characteristic of the spoken word 'ALL STATIONS' when preceding a transmission from an Air Traffic Control (ATC) unit?

A. The message is of a confidential nature and only authorized personnel should should listen.

B. The message is directed to all aircraft stations within the receiving range of of the frequency or unit.

C. It is a request for a radio check from every aircraft on the frequency.

GHOST AVIATOR

Correct Answer: B

157. Which information is mandatory to be given to ATC for pushback and engine start?

A. Route and cruising level

B. Fuel on board

GHOST AVIATOR

C. Aircraft call sign, stand, request for pushback/engine start, ATIS

Correct Answer: C

158. What is the correct order of priority in radiotelephony?

A. Urgency → Distress → Flight safety

B. Regularity → Meteorological → Distress

C. Distress → Urgency → Flight safety → Meteorological → Regularity

Correct Answer: C

GHOST AVIATOR

159. What is the correct order of a visual circuit pattern?

A. Downwind → Base → Crosswind → Final

B. Upwind → Crosswind → Downwind → Base → Final

C. Crosswind → Upwind → Final → Base

Correct Answer: B

GHOST AVIATOR

160. Which of the following positions are reported in a visual circuit?

A. Taxi and holding point

B. Initial and overhead

C. Upwind, Crosswind, Downwind, Base, Final

Correct Answer: C

GHOST AVIATOR

161. How is the call sign “AIC 200” read on RT?

A. Air India two zero zero

B. Air India Two Hundred

C. Air India two double zero

Correct Answer: A

GHOST AVIATOR

162. How much time before entering controlled airspace should clearance be requested?

A. 5 minutes

B. 10 minutes

C. 15 minutes

Correct Answer: B

GHOST AVIATOR

163. If transmitter power is increased four times, the range will

A. Remain same

B. Increase 4 times

C. Double

Correct Answer: C

GHOST AVIATOR

164. What is the correct term meaning “I have received your transmission”?

A. Wilco

B. Affirm

C. Roger

Correct Answer: C

GHOST AVIATOR

165. Which of the following is NOT an essential piece of information for a standard Position Report?

A. Time over the reporting point.

B. Position/Identification of the reporting point.

C. Fuel on board in gallons.

Correct Answer: C

GHOST AVIATOR

166. Define the term Readability Code 3.

A. Unreadable

B. Readable now and then

C. Readable, but with difficulty

Correct Answer: C

GHOST AVIATOR

167. How must the number '12,500' be spoken in radiotelephony?

A. ONE TWO FIVE ZERO ZERO

B. ONE TWO THOUSAND FIVE HUNDRED

C. TWELVE THOUSAND FIVE HUNDRED

Correct Answer: B

GHOST AVIATOR

168. Which instruction from ATC must be read back by the pilot?

A. Weather conditions (METAR).

B. ATC route clearances.

C. Advisory information.

Correct Answer: B

GHOST AVIATOR

169. What is the full phraseology for cancelling an urgent message if the situation has improved?

A. PAN-PAN TERMINATED

B. CANCELLING URGENCY

C. PAN-PAN OVER

Correct Answer: B

GHOST AVIATOR

170. Under what condition is an aircraft permitted to use a shortened callsign?

A. The aircraft initiates the shortening after the first successful contact.

B. When the pilot deems the radio channel to be non-congested.

C. After the ground station (ATC) has initiated the use of the shortened callsign.

Correct Answer: C

GHOST AVIATOR

171. If a message is classified as a Safety message, what does it primarily concern?

A. The safety of the destination runway.

B. The safety of navigation or the significant weather warnings.

C. The regular operational movements of the aircraft.

Correct Answer: B

GHOST AVIATOR

172. What is the recommended maximum duration for a single transmission on the air?

A. No more than 60 seconds.

B. No more than 30 seconds.

C. Only enough time to say the critical information.

Correct Answer: C

GHOST AVIATOR

173. Security — safeguarding civil aviation against unlawful interference is covered under—?

A. Annex 12

B. Annex 17

C. Annex 19

GHOST AVIATOR

Correct Answer: B

174. Which ICAO Annex deals with the performance of distress monitoring, communication, coordination, and search and rescue?

A. Annex 11

B. Annex 12

C. Annex 13

Correct Answer: B

GHOST AVIATOR

175. The primary function described—distress monitoring, coordination, and medical evacuation— falls under

A. ATS services

B. AIS services

C. Search and Rescue (SAR) services

GHOST AVIATOR

Correct Answer: C

176. In SAR, distress communication involves

A. Only VFR aircraft

B. Handling and relaying distress messages from any aircraft in need of assistance

C. Only communication between ATC units

Correct Answer: B

GHOST AVIATOR

177. The term "distress monitoring" refers to

A. Monitoring runway lighting

B. Monitoring ATIS broadcasts

C. Monitoring and responding to distress alerts from aircraft

Correct Answer: C

GHOST AVIATOR

178. Which of the following is NOT an ELT distress frequency?

A. 121.5 MHz

B. 118.1 MHz

C. 406 MHz

Correct Answer: B

GHOST AVIATOR

179. Marine distress frequency associated with ELT-type beacons is

A. 3270 kHz

B. 2182 kHz

C. 1720 kHz

Correct Answer: B

GHOST AVIATOR

180. The distress signal 'MAYDAY' must be preceded by which alerting call?

A. PAN-PAN (three times)

B. MAYDAY RELAY (three times)

C. MAYDAY (three times)

Correct Answer: C

GHOST AVIATOR

181. What is the primary action required by a pilot who hears an urgency call (PAN-PAN) on the frequency?

A. Immediately change frequency to clear the channel.

B. Continue routine transmission, as it is only an urgency call.

C. Cease any transmission likely to interfere with the urgency communication.

Correct Answer: C

GHOST AVIATOR

Join live classes for guided practice and doubt clearing.

182. The transmission of the distress message (MAYDAY message) should contain which three mandatory pieces of information, immediately after the distress signal?

A. Aircraft color, number of people on board, and destination.

B. Position, nature of distress, and pilot's name.

C. Aircraft call sign, position, and nature of distress.

GHOST AVIATOR

Correct Answer: C

183. The distress signal MAYDAY, when spoken three times, indicates what level of urgency for the aircraft and its occupants?

A. An urgent situation concerning the safety of an aircraft or other vehicle, or of

B. The aircraft is experiencing a minor technical fault that requires attention but is

C. The aircraft is threatened by grave and imminent danger and requires

GHOST AVIATOR

Correct Answer: C

184. What does the urgency signal “PAN PAN” indicate?

A. Immediate danger requiring assistance

B. Safety of aircraft/person on board, not requiring immediate assistance

C. Radio failure

Correct Answer: B

GHOST AVIATOR

185. What is the international distress frequency?

A. 123.45 MHz

B. 118.00 MHz

C. 121.5 MHz

Correct Answer: C

GHOST AVIATOR

186. What is the internationally recognized Distress signal?

A. PAN-PAN (spoken three times)

B. SECURITE (spoken three times)

C. MAYDAY (spoken three times)

Correct Answer: C

GHOST AVIATOR

187. What is the internationally recognized Urgency signal?

A. PAN-PAN (spoken three times)

B. MAYDAY (spoken three times)

C. EMERGENCY (spoken three times)

Correct Answer: A

GHOST AVIATOR

188. What action must an aircraft take immediately upon hearing the signal 'MAYDAY' on a frequency it is monitoring?

A. Reply to the distressed aircraft to offer assistance.

B. Cease all transmissions immediately and maintain a listening watch.

C. Transmit "SEELONCE FEENEE" to clear the frequency.

Correct Answer: B

GHOST AVIATOR

189. Which are the two highest priority messages after Distress and Urgency calls?

A. Movement and Safety.

B. Meteorological and Regularity.

C. Safety and Regularity.

GHOST AVIATOR

Correct Answer: C

190. What is the meaning of the phrase "SQUAWK 7700"?

A. Radio Communication Failure

B. Unlawful Interference

C. General Emergency

Correct Answer: C

GHOST AVIATOR

Meteorology, Pressure & RVR

191. What is the meaning of the phrase "SQUAWK 7600"?

A. General Emergency

B. Unlawful Interference

C. Radio Communication Failure

GHOST AVIATOR

Correct Answer: C

192. ICAO is a specialized agency of which global organization?

A. International Court of Justice

B. World Trade Organization

C. United Nations

Correct Answer: C

GHOST AVIATOR

193. CAR Section 2, Series ‘O’ specifically relates to—?

A. Operating minima for airports

B. Operational requirements for aircraft

C. Cabin safety regulations

Correct Answer: B

GHOST AVIATOR

194. Aeronautical Charts are published as per specifications in—?

A. Annex 4

B. Annex 11

C. Annex 15

Correct Answer: A

GHOST AVIATOR

195. Operational temperature range of an ELT is

A. 0°C to 40°C

B. –20°C to +55°C

C. –40°C to +80°C

Correct Answer: B

GHOST AVIATOR

196. In a METAR, the code VRB is used when

A. Wind speed is more than 15 kt

B. Wind direction cannot be determined

C. Winds are calm

Correct Answer: B

GHOST AVIATOR

197. VRB appears in a METAR instead of wind direction when

A. Surface wind is above 20 kt

B. Wind is calm

C. Wind direction fluctuates so much that no definite direction exists

Correct Answer: C

GHOST AVIATOR

198. A gust is defined as a sudden increase in wind speed lasting

A. More than 5 minutes

B. Less than one minute

C. Exactly one minute

Correct Answer: B

GHOST AVIATOR

199. For a gust to be included in a METAR/TAF, it must be at least

A. 5 kt above mean wind

B. 8 kt above mean wind

C. 10 kt above mean wind

Correct Answer: C

GHOST AVIATOR

200. In METAR, how is a gust reported?

A. Appended after visibility

B. Shown as a separate line

C. Added after mean wind speed with letter G

Correct Answer: C

GHOST AVIATOR

201. Example: METAR showing 12010G25KT indicates

A. Wind from 120° at 25 kt

B. Wind from 120° at 10 kt, gusting to 25 kt

C. Wind variable between 10–25 kt

Correct Answer: B

GHOST AVIATOR

202. What is the standard phraseology for expressing visibility of 10 kilometers or more?

A. VISIBILITY ONE ZERO KILOMETRES

B. VISIBILITY ONE ZERO PLUS

C. VISIBILITY TEN KILOMETRES OR MORE or VISIBILITY MORE THAN NINE

Correct Answer: C

GHOST AVIATOR

203. The Q-code QFE is used for setting the altimeter to read

A. Altitude above Mean Sea Level (MSL).

B. Pressure altitude (standard pressure 1013.2 hPa).

C. Height above the aerodrome elevation (Zero on the ground at the field

Correct Answer: C

GHOST AVIATOR

204. Which procedural word (proword) is used by a ground station to indicate that the aircraft is authorized to proceed under the conditions specified?

A. STANDBY

B. CLEARED

C. ROGER

Correct Answer: B

GHOST AVIATOR

205. What is the correct meaning of the Q-code QNH?

A. The atmospheric pressure at aerodrome elevation.

B. The atmospheric pressure at mean sea level (MSL) used for setting the

C. The magnetic bearing from the station to the aircraft.

Correct Answer: B

GHOST AVIATOR

206. What is the standard phraseology used by a mobile station to request the atmospheric pressure setting that will cause the altimeter to indicate elevation above the aerodrome reference point?

A. REQUEST QNH

B. REQUEST QFE

C. REQUEST ELEVATION

GHOST AVIATOR

Correct Answer: B

207. ATC gives an altimeter setting of 1007. How is it read?

A. One zero zero seven

B. QNH one zero zero seven

C. One thousand seven

GHOST AVIATOR

Correct Answer: B

208. The meaning of the abbreviation QNH is

A. Altimeter setting to read height above the aerodrome.

B. Altimeter setting to read height above Mean Sea Level (MSL).

C. The standard pressure of 1013.2 hPa.

Correct Answer: B

GHOST AVIATOR

209. The meaning of the abbreviation QFE is

A. Altimeter setting to read height above MSL.

B. Standard atmospheric pressure setting.

C. Altimeter setting to read zero when on the ground (height above aerodrome elevation).

Correct Answer: C

GHOST AVIATOR

210. What altimeter setting must be used when operating at or above the Transition Level (TL)?

A. QFE

B. QNH of the destination aerodrome

C. The standard pressure setting (1013.2 hPa)

Correct Answer: C

GHOST AVIATOR

211. What is the full form of the abbreviation METAR and what information does it contain?

A. Medium Terminal Advisory Report; forecast weather.

B. Aviation Routine Weather Report; actual weather observation.

C. Meteorological Terminal Area Report; general climate info.

GHOST AVIATOR

Correct Answer: B

Join live classes for guided practice and doubt clearing.

212. Who grants Air Operator’s Certificates (AOC) to Indian carriers?

A. BCAS

B. AAI

C. DGCA

Correct Answer: C

GHOST AVIATOR

213. Why is a single HF frequency NOT suitable for 24-hour aircraft communication?

A. HF radios cannot operate continuously

B. HF propagation varies due to day/night effects

C. VHF interference blocks HF signals

Correct Answer: B

GHOST AVIATOR

214. Due to propagation problems on HF, aircraft are allotted—?

A. Only one HF channel

B. Two frequencies: Primary and Secondary

C. Three frequencies for every phase of flight

Correct Answer: B

GHOST AVIATOR

215. The selection of primary and secondary HF frequencies depends mainly on—?

A. Pilot’s preference

B. Time of departure, nature of flight (domestic/international), and route/area of flight

C. Colour of aircraft

GHOST AVIATOR

Correct Answer: B

216. The system that allows ground stations to alert crew without constant listening on HF is—?

A. ADS-B

B. SELCAL

C. ELT

Correct Answer: B

GHOST AVIATOR

217. HF propagation issues requiring two frequencies are mainly caused by—?

A. Airport congestion

B. Rain and snow only

C. Day and night variation in the ionosphere

Correct Answer: C

GHOST AVIATOR

218. HF is mainly used along with SELCAL because—?

A. HF audio is extremely clear

B. Continuous listening on HF is difficult due to static and noise

C. HF requires no tuning

Correct Answer: B

GHOST AVIATOR

219. In long-range communication, the secondary HF frequency is used when—?

A. The primary frequency is too busy

B. Pilot requests music

C. Propagation on the primary frequency is poor

Correct Answer: C

GHOST AVIATOR

220. The primary purpose of SELCAL in aircraft communication is to—?

A. Improve HF signal strength

B. Alert pilots without continuous radio monitoring

C. Replace HF radios

Correct Answer: B

GHOST AVIATOR

221. SELCAL is mainly used to reduce pilot workload because—?

A. HF is never used anymore

B. Continuous monitoring of HF causes static noise and fatigue

C. VHF is always unavailable

Correct Answer: B

GHOST AVIATOR

222. SELCAL is a system used for communication—?

A. Aircraft-to-aircraft

B. Ground-to-air only

C. Satellite-to-air

Correct Answer: B

GHOST AVIATOR

223. In India, SELCAL signals are transmitted over—?

A. VHF only

B. HF and VHF

C. HF only

Correct Answer: C

GHOST AVIATOR

224. A SELCAL code consists of—?

A. Four digits

B. Four letters

C. Two letters and two numbers

Correct Answer: B

GHOST AVIATOR

225. SELCAL letters may include—?

A. A to Z

B. Only vowels

C. A to S, excluding I, O, N

Correct Answer: C

GHOST AVIATOR

226. A valid SELCAL code must contain—?

A. Repeated letters

B. One pair of tones

C. Two pairs of letters in ascending order

Correct Answer: C

GHOST AVIATOR

227. Which of the following SELCAL codes is correctly formed?

A. BP CO

B. AB CD

C. GG HI

Correct Answer: B

GHOST AVIATOR

228. How long does a complete SELCAL transmission take?

A. 5 seconds

B. Approximately 2.2 seconds

C. 10 seconds

Correct Answer: B

GHOST AVIATOR

229. The pause between the two SELCAL tone pairs is—?

A. 1 second

B. 0.2 seconds

C. 2 seconds

Correct Answer: B

GHOST AVIATOR

230. SELCAL cannot include repeated letters because—?

A. HF cannot transmit repeating tones

B. Each tone must be unique for identification

C. ICAO does not allow consonants

Correct Answer: B

GHOST AVIATOR

231. A SELCAL code like “AD BC” is—?

A. Incorrect because D is not allowed

B. Incorrect because pairs must be alphabetical

C. Correct, because both pairs are in ascending order

Correct Answer: C

GHOST AVIATOR

232. What happens in the cockpit when a valid SELCAL tone is received?

A. HF becomes unreadable

B. A light flashes or chime sounds to alert the crew

C. VHF disconnects

Correct Answer: B

GHOST AVIATOR

233. SELCAL-32 was introduced mainly to—?

A. Increase HF transmission power

B. Reduce cockpit noise

C. Increase the total number of available SELCAL codes

Correct Answer: C

GHOST AVIATOR

234. SELCAL-32 allows the use of which additional characters?

A. W, X, Y only

B. T to Z, and digits 1 to 9

C. All letters A–Z including I and O

Correct Answer: B

GHOST AVIATOR

235. Traditional SELCAL used only letters from—?

A. A to Z

B. A to F

C. A to S (excluding I, O, N)

Correct Answer: C

GHOST AVIATOR

236. SELCAL-32 increases the number of possible SELCAL combinations to —?

A. 10,000

B. 1 million

C. More than 2 lakh unique codes

Correct Answer: C

GHOST AVIATOR

237. What appears in the cockpit when a SELCAL alert is received?

A. Radio volume automatically increases

B. A chime sounds and a SELCAL light illuminates

C. The HF radio switches off

Correct Answer: B

GHOST AVIATOR

238. Where is the SELCAL controller located?

A. In the avionics bay

B. On the flight deck

C. In the cabin

Correct Answer: B

GHOST AVIATOR

239. After the crew responds to a SELCAL alert, they must—?

A. Change HF frequency

B. Press the reset button to arm the system for the next call

C. Switch to VHF communication

Correct Answer: B

GHOST AVIATOR

240. Why were digits 1–9 added in SELCAL-32?

A. To simplify tone generation

B. To greatly expand the number of assignable SELCAL codes

C. To avoid confusion with Morse code

Correct Answer: B

GHOST AVIATOR

241. In SELCAL-32, which of the following is a valid component?

A. Letter “O”

B. Number “7”

C. Letter “I”

Correct Answer: B

GHOST AVIATOR

242. What is the operational advantage of SELCAL for the flight crew?

A. It eliminates the need for HF radios

B. Crew do not need to continuously monitor HF manually

C. It replaces CPDLC on oceanic routes

Correct Answer: B

GHOST AVIATOR

243. Which organization handles the worldwide registration of SELCAL codes?

A. ICAO

B. Aviation Spectrum Resources

C. AAI

Correct Answer: B

GHOST AVIATOR

244. Registration of SELCAL codes with Aviation Spectrum Resources is—?

A. Free of cost

B. Included with aircraft registration

C. A paid service

Correct Answer: C

GHOST AVIATOR

245. SELCAL codes are assigned to—?

A. Aircraft operators

B. Individual aircraft

C. Flight crew members

Correct Answer: B

GHOST AVIATOR

246. In a flight plan, where is the SELCAL code entered?

A. Item 15

B. Item 10

C. Item 18 using the “SEL/” indicator

Correct Answer: C

GHOST AVIATOR

247. The purpose of Aviation Spectrum Resources maintaining SELCAL registration is to—?

A. Allocate HF frequencies

B. Monitor ATC radio calls

C. Ensure global uniqueness and avoid duplicate SELCAL codes

Correct Answer: C

GHOST AVIATOR

248. When is a SELCAL code typically registered for an operator?

A. After every flight

B. At the time of acquiring or adding aircraft to their fleet

C. Before each departure

Correct Answer: B

GHOST AVIATOR

249. Why is SELCAL registration important?

A. To increase aircraft MTOW

B. To prevent two aircraft from having the same SELCAL tones

C. To allow CPDLC operations

Correct Answer: B

GHOST AVIATOR

250. Utilization and protection of the aeronautical radio frequency spectrum is covered in which volume of Annex 10?

A. Volume I

B. Volume V

C. Volume IV

Correct Answer: B

GHOST AVIATOR

251. Frequency allocation rules ensuring no harmful interference in aeronautical bands are described in which Annex 10 volume?

A. Volume V

B. Volume IV

C. Volume I

GHOST AVIATOR

Correct Answer: A

252. Which frequency band is primarily used for long-distance, high-frequency (HF) aeronautical communications?

A. VHF (Very High Frequency)

B. UHF (Ultra High Frequency)

C. HF (High Frequency)

Correct Answer: C

GHOST AVIATOR

253. What is the maximum effective communication range of standard VHF (Very High Frequency) air- ground communication, which is essentially line-of-sight?

A. 50 nautical miles (NM)

B. Approximately 200 nautical miles (NM) at high altitudes.

C. 2,000 nautical miles (NM)

GHOST AVIATOR

Correct Answer: B

Join live classes for guided practice and doubt clearing.

254. What is the correct phraseology ATC should use to instruct a pilot to change frequency from the current controlling agency to another?

A. CHANGE TO NEW FREQUENCY

B. REQUEST CONTACT

C. CONTACT [CONTROL UNIT] [FREQUENCY]

Correct Answer: C

GHOST AVIATOR

255. If impedance is reduced, what happens to current?

A. Decreases

B. Becomes zero

C. Increases

Correct Answer: C

GHOST AVIATOR

256. What is wavelength?

A. Speed of wave

B. Distance between two successive crests or troughs

C. Number of cycles per second

Correct Answer: B

GHOST AVIATOR

257. What is frequency?

A. Distance between waves

B. Wave speed

C. Number of cycles per second

Correct Answer: C

GHOST AVIATOR

258. What is the wavelength of a 300 MHz frequency?

A. 3 metres

B. 30 cm

C. 1 metre

Correct Answer: C

GHOST AVIATOR

259. What is the inter-pilot air-to-air communication frequency?

A. 121.5 MHz

B. 122.8 MHz

C. 123.45 MHz

Correct Answer: C

GHOST AVIATOR

260. What is the standard VHF Emergency Frequency?

A. 121.5 MHz

B. 123.45 MHz

C. 118.0 MHz

Correct Answer: A

GHOST AVIATOR

261. What is the correct phraseology for requesting permission to change frequency?

A. REQUEST CHANGE TO [frequency/station].

B. CLEARED TO CHANGE FREQUENCY.

C. ROGER CHANGE FREQUENCY.

Correct Answer: A

GHOST AVIATOR

262. What is the primary purpose of Selective Calling (SELCAL)?

A. To automatically select the best radio channel.

B. To provide an alternate communication means during RCF.

C. To alert a specific aircraft crew to an incoming radio call.

Correct Answer: C

GHOST AVIATOR

263. Which radio wave property allows HF to travel long distances?

A. Line-of-sight propagation.

B. Skywave reflection off the Ionosphere.

C. Ground wave following the Earth's curvature.

Correct Answer: B

GHOST AVIATOR

264. Why is VHF communication primarily line-of-sight?

A. The transmitter power is very low.

B. VHF waves do not bend significantly around the Earth's curvature or reflect off the ionosphere.

C. The frequency is too low.

Correct Answer: B

GHOST AVIATOR

265. What does the term 'Simplex' operation mean in radiotelephony?

A. Two frequencies used simultaneously for both transmission and reception.

B. A single frequency used for both transmission and reception, but only one station transmits at a time.

C. The ability to transmit and receive simultaneously on a single frequency.

GHOST AVIATOR

Correct Answer: B

Join live classes for guided practice and doubt clearing.

266. What type of modulation is used for standard VHF voice communication in aviation?

A. Amplitude Modulation (AM).

B. Frequency Modulation (FM).

C. Single Sideband (SSB).

Correct Answer: A

GHOST AVIATOR

267. What is the function of the Squelch circuit in a radio receiver?

A. To increase the volume of weak signals.

B. To tune the receiver to the exact frequency.

C. To suppress background receiver noise when no signal is present.

Correct Answer: C

GHOST AVIATOR

268. The relationship between Wavelength (\lambda) and Frequency (f) is defined by

A. \lambda = f / c

B. \lambda = f \times c

C. \lambda = c / f (where c is the speed of light)

Correct Answer: C

GHOST AVIATOR

269. What is the primary advantage of using the Single Sideband (SSB) technique in HF communication?

A. Superior clarity and audio fidelity.

B. Elimination of all static and noise.

C. Increased range and efficiency by reducing bandwidth and wasted power.

GHOST AVIATOR

Correct Answer: C

270. The process of separating the voice signal from the carrier wave in the receiver is called

A. Modulation

B. Demodulation

C. Rectification

Correct Answer: B

GHOST AVIATOR

271. The most common radio wave propagation mode for VHF is

A. Skywave.

B. Surface wave.

C. Direct/Line-of-sight.

Correct Answer: C

GHOST AVIATOR

272. The term 'Dead Zone' is a problem primarily associated with which frequency band?

A. VHF

B. UHF

C. HF

Correct Answer: C

GHOST AVIATOR

273. The speed of a radio wave in a vacuum is approximately

A. 300 meters per second

B. 300 kilometers per second

C. 300,000 kilometers per second

Correct Answer: C

GHOST AVIATOR

274. What is the primary limitation of VHF (Very High Frequency) radio for long-distance communication?

A. Susceptibility to sunspot activity.

B. Limited frequency bandwidth.

C. Line-of-sight propagation.

Correct Answer: C

GHOST AVIATOR

275. The process of modifying a high-frequency carrier wave with a low-frequency signal (voice) is called

A. Demodulation

B. Coupling

C. Modulation

GHOST AVIATOR

Correct Answer: C

276. Which band of frequencies is most affected by the changes in the Ionosphere between day and night?

A. VHF

B. UHF

C. HF

Correct Answer: C

GHOST AVIATOR

277. What is a Transceiver?

A. A device that only transmits radio signals.

B. A device that only receives radio signals.

C. A unit combining a transmitter and a receiver.

Correct Answer: C

GHOST AVIATOR

278. In the formula for wavelength (\lambda) and frequency (f), \lambda = c/f, what does 'c' represent?

A. Capacitance

B. Speed of the aircraft

C. Speed of light (radio wave)

Correct Answer: C

GHOST AVIATOR

279. The term 'Dead Zone' or 'Skip Zone' is associated with which type of radio wave propagation?

A. Ground wave

B. Line-of-sight

C. Skywave (HF)

GHOST AVIATOR

Correct Answer: C

280. Which type of antenna is commonly used for VHF communication on aircraft?

A. Long wire antenna

B. Blade or whip antenna

C. Loop antenna

Correct Answer: B

GHOST AVIATOR

281. What is the standard audio frequency range for human speech transmitted in radiotelephony?

A. 100 kHz to 300 kHz

B. 300 Hz to 3400 Hz

C. 10 kHz to 20 kHz

GHOST AVIATOR

Correct Answer: B

282. What does AM stand for in the context of radio modulation?

A. Antenna Modulation

B. Amplitude Modulation

C. Analog Modulation

Correct Answer: B

GHOST AVIATOR

283. The main advantage of using HF SSB (Single Sideband) for long-range communication over traditional AM is

A. Lower bandwidth and higher range for the same power.

B. Higher fidelity and clearer audio.

C. It is immune to lightning and atmospheric static.

Correct Answer: A

GHOST AVIATOR

284. In an aircraft's VHF radio system, the inter-communication system used for communication between the cockpit and the cabin is called the

A. ATC Radio

B. Interphone or Cabin Announcing System

C. HF Radio

Correct Answer: B

GHOST AVIATOR

285. DGCA must align its rules and requirements with amendments made to what?

A. Airport Authority manuals

B. Airline SOPs

C. ICAO Annexes

GHOST AVIATOR

Correct Answer: C

286. AAI provides which communication and navigation aids?

A. SONAR, GPS, HF-SDR

B. ILS, DVOR, DME, Radar

C. GPWS, TCAS, ELT

Correct Answer: B

GHOST AVIATOR

287. Radio Navigational Aids such as VOR, DME, and ILS fall under which volume of Annex 10?

A. Volume I

B. Volume IV

C. Volume V

Correct Answer: A

GHOST AVIATOR

288. Surveillance Radar and Collision Avoidance Systems (SSR, Mode S, TCAS) are included in which volume?

A. Volume II

B. Volume V

C. Volume IV

Correct Answer: C

GHOST AVIATOR

289. Accuracy of modern 406 MHz ELT with GPS (NG ELT) is

A. 20 km

B. 5 km

C. 500 meters

Correct Answer: C

GHOST AVIATOR

290. In the event of a total communication failure (radio failure) on an IFR flight, the pilot should first set the transponder to which emergency code?

A. 7500

B. 7600

C. 7700

Correct Answer: B

GHOST AVIATOR

291. When a radiotelephone operator is told to 'STANDBY', what is the expected action?

A. Immediately change frequency as instructed.

B. End the transmission with 'OUT' and await further instructions.

C. Wait for a short but unspecified period for a reply.

GHOST AVIATOR

Correct Answer: C

292. DME operates in which frequency band?

A. VHF

B. HF

C. UHF

Correct Answer: C

GHOST AVIATOR

293. If experiencing RCF in IMC, the pilot should immediately set the transponder to which code?

A. 7700

B. 7600

C. 7500

Correct Answer: B

GHOST AVIATOR

294. What is the function of the Transponder in air traffic control?

A. To transmit radio messages to ATC.

B. To reply to ground radar interrogation with a code and altitude information.

C. To receive all ATC instructions and display them digitally.

Correct Answer: B

GHOST AVIATOR

295. Who is responsible for issuing Certificates of Airworthiness in India?

A. AAI

B. MoCA

C. DGCA

Correct Answer: C

GHOST AVIATOR

296. Which authority in India investigates civil aviation accidents and incidents?

A. NTSB

B. AAI

C. Aircraft Accident Investigation Bureau (AAIB)

Correct Answer: C

GHOST AVIATOR

297. Who approves operator training programmes for carriage of dangerous goods?

A. BCAS

B. ICAO

C. DGCA

GHOST AVIATOR

Correct Answer: C

298. Provision of passenger facilities and information systems at airports falls under which organization?

A. DGCA

B. BCAS

C. AAI

Correct Answer: C

GHOST AVIATOR

299. Provision of Air Traffic Services (ATS) at airports under its jurisdiction is done by whom?

A. DGCA

B. Indian Air Force

C. AAI

GHOST AVIATOR

Correct Answer: C

300. What is the primary purpose of an Air Defence Identification Zone (ADIZ)?

A. To provide meteorological updates to aircraft

B. To define airspace where special communication and reporting procedures apply

C. To regulate airport parking stands

Correct Answer: B

GHOST AVIATOR

301. How many ADIZ regions are designated in India?

A. 3

B. 4

C. 5

Correct Answer: C

GHOST AVIATOR

302. The Western ADIZ of India lies along which boundary?

A. International border with Nepal

B. International border with Pakistan

C. LOC of China

Correct Answer: B

GHOST AVIATOR

303. The South ADIZ covers which airspace?

A. Airspace over the Bay of Bengal

B. Airspace over territorial waters of Lakshadweep Islands

C. Airspace over the Rann of Kutch

Correct Answer: B

GHOST AVIATOR

304. Before entering an ADIZ from outside Indian FIR, aircraft must obtain ADC at least—?

A. 30 minutes prior to entry

B. 10 minutes prior to entering Indian airspace

C. Only after entering the FIR

Correct Answer: B

GHOST AVIATOR

305. Which ADIZ lies along the Line of Control (LOC) with Pakistan and China?

A. East ADIZ

B. North ADIZ

C. West ADIZ

Correct Answer: B

GHOST AVIATOR

306. Which ADIZ is a subordinate extension to the South ADIZ?

A. East ADIZ

B. Central ADIZ

C. South-East ADIZ

Correct Answer: C

GHOST AVIATOR

307. ADC issued to an aircraft remains valid for—?

A. Only the first FIR

B. Only for the climb phase

C. The entire route

Correct Answer: C

GHOST AVIATOR

308. The Central ADIZ corresponds to which international boundaries?

A. Bangladesh border only

B. Sri Lanka FIR boundary

C. International border with Nepal and LOC of China

Correct Answer: C

GHOST AVIATOR

309. The Pre-Flight Information Bulletin (PIB) contains—?

A. Radar service availability

B. HF/MF communication schedules

C. Current NOTAMs of operational significance

Correct Answer: C

GHOST AVIATOR

310. Which publication is issued by or with the authority of the State?

A. AIP

B. NOTAM

C. AIRAC

Correct Answer: A

GHOST AVIATOR

311. If a change in airspace procedures is to be implemented, which system ensures pilots get advance notice?

A. AIC

B. PIB

C. AIRAC

Correct Answer: C

GHOST AVIATOR

312. PIB is prepared—?

A. After aircraft landing

B. Before the flight

C. Once every AIRAC cycle

Correct Answer: B

GHOST AVIATOR

313. An aerodrome is defined as—?

A. Only a paved runway for aircraft operations

B. A terminal building for passenger movement

C. A defined area of land/water intended for arrival, departure, and surface movement of aircraft

Correct Answer: C

GHOST AVIATOR

314. Which statement correctly describes an aerodrome?

A. It includes land only, not water

B. It may include buildings, installations, and equipment

C. It must have customs and immigration facilities

Correct Answer: B

GHOST AVIATOR

315. An airport is best described as—?

A. Any open field used for emergency landings

B. A landing/take-off area with runway and passenger facilities such as customs & immigration

C. A location used only for helicopter operations

Correct Answer: B

GHOST AVIATOR

316. Which of the following is a key difference between an aerodrome and an airport?

A. Airports allow military aircraft only

B. Airports have additional facilities such as maintenance, terminal buildings, customs, and immigration

C. Aerodromes must have more than one runway

GHOST AVIATOR

Correct Answer: B

317. Which of the following is true?

A. All aerodromes are airports

B. All airports are aerodromes, but not all aerodromes qualify as airports

C. Aerodromes require mandatory customs facilities

GHOST AVIATOR

Correct Answer: B

318. Which area does the definition of aerodrome include?

A. Only concrete or asphalt surfaces

B. Land or water used for aircraft movements

C. Only areas monitored by ATC

Correct Answer: B

GHOST AVIATOR

319. An airport must include—?

A. Cargo handling only

B. Runway + aerodrome facilities + passenger facilities (customs, immigration, terminal)

C. ATC tower only

Correct Answer: B

GHOST AVIATOR

320. Meteorological Services for International Air Navigation is covered under —?

A. Annex 4

B. Annex 9

C. Annex 3

Correct Answer: C

GHOST AVIATOR

321. Operation of Aircraft is covered under—?

A. Annex 11

B. Annex 6

C. Annex 1

Correct Answer: B

GHOST AVIATOR

322. Airworthiness requirements for aircraft are contained in—?

A. Annex 8

B. Annex 6

C. Annex 16

Correct Answer: A

GHOST AVIATOR

323. Facilitation (customs, immigration, passenger processing) is included in —?

A. Annex 15

B. Annex 9

C. Annex 12

Correct Answer: B

GHOST AVIATOR

324. Aeronautical Telecommunications is covered under—?

A. Annex 11

B. Annex 10

C. Annex 18

Correct Answer: B

GHOST AVIATOR

325. Search and Rescue (SAR) procedures are covered under—?

A. Annex 12

B. Annex 17

C. Annex 18

Correct Answer: A

GHOST AVIATOR

326. Aircraft Accident & Incident Investigation is addressed in—?

A. Annex 16

B. Annex 13

C. Annex 14

Correct Answer: B

GHOST AVIATOR

327. Environmental protection requirements are detailed in—?

A. Annex 8

B. Annex 16

C. Annex 6

Correct Answer: B

GHOST AVIATOR

328. The safe transport of dangerous goods by air is covered in—?

A. Annex 10

B. Annex 18

C. Annex 3

Correct Answer: B

GHOST AVIATOR

329. Safety Management System (SMS) is part of—?

A. Annex 2

B. Annex 11

C. Annex 19

Correct Answer: C

GHOST AVIATOR

330. In India, IFR and VFR flights are permitted in which airspace classes?

A. Only Class D and E

B. Only Class C

C. All airspace classes

Correct Answer: C

GHOST AVIATOR

331. Class C airspace in India provides which type of separation?

A. IFR–IFR only

B. IFR–IFR & IFR–VFR separation

C. IFR receives only traffic information

Correct Answer: B

GHOST AVIATOR

332. Class D airspace in India is typically associated with which areas?

A. Only ATS routes

B. CTAs, TMAs, CTZs, and ATZs

C. FIR only

Correct Answer: B

GHOST AVIATOR

333. What services are provided in Class D airspace?

A. IFR receives no separation

B. IFR–IFR separation; IFR–VFR traffic information

C. Only flight information service

Correct Answer: B

GHOST AVIATOR

334. Class E airspace in India generally applies to

A. Inside CTAs and TMAs

B. ATS routes outside CTAs and TMAs

C. Military restricted airspace

Correct Answer: B

GHOST AVIATOR

335. What ATC service does Class E airspace provide?

A. No service to any flight

B. Service only to VFR

C. ATC service to IFR; traffic information to all flights

Correct Answer: C

GHOST AVIATOR

336. Class F airspace in India provides which service to IFR flights?

A. Full ATC separation

B. Advisory service

C. Only alerting service

Correct Answer: B

GHOST AVIATOR

337. In Class F airspace, what service is provided to all aircraft upon request?

A. Radar vectors

B. FIS (Flight Information Service)

C. Procedural separation

Correct Answer: B

GHOST AVIATOR

338. Class G airspace in India is defined as

A. Controlled airspace with VFR restrictions

B. Standby-only airspace

C. Uncontrolled airspace (other than D, E, and F)

Correct Answer: C

GHOST AVIATOR

339. In Class G airspace, what service is provided?

A. Full ATC service

B. FIS to all aircraft

C. No services at all

Correct Answer: B

GHOST AVIATOR

340. Which type of airspace in India does NOT permit flight under any circumstance?

A. Restricted Area

B. Danger Area

C. Prohibited Area

Correct Answer: C

GHOST AVIATOR

341. A Prohibited Area in India is identified using which format?

A. FIR + (R) + Number

B. FIR + (D) + Number

C. FIR + (P) + Number

Correct Answer: C

GHOST AVIATOR

342. VA(P)-2 refers to which of the following?

A. Danger Area No. 2 in Delhi FIR

B. Prohibited Area No. 2 in Mumbai FIR

C. Restricted Area No. 2 in Mumbai FIR

Correct Answer: B

GHOST AVIATOR

343. Which statement correctly describes a Restricted Area?

A. Flights are always allowed without clearance.

B. Flights are allowed but with restrictions as notified.

C. Flights are never allowed.

Correct Answer: B

GHOST AVIATOR

344. Restricted Areas in India are marked with which letter?

A. D

B. R

C. P

Correct Answer: B

GHOST AVIATOR

345. VO(R)-81 indicates which of the following?

A. Danger Area No. 81 in Chennai FIR

B. Restricted Area No. 81 in Chennai FIR

C. Prohibited Area No. 81 in Chennai FIR

Correct Answer: B

GHOST AVIATOR

346. A Danger Area contains what type of activity?

A. ATC training

B. Activities dangerous to aircraft operations

C. VIP movement only

Correct Answer: B

GHOST AVIATOR

347. When must aircraft avoid a Danger Area?

A. At all times

B. Never

C. When the area is active, as notified by NOTAM

Correct Answer: C

GHOST AVIATOR

348. VE(D)-72 refers to what?

A. Restricted Area in Kolkata FIR

B. Prohibited Area in Kolkata FIR

C. Danger Area No. 72 in Kolkata FIR

Correct Answer: C

GHOST AVIATOR

349. What is the purpose of designating a Danger Area?

A. To legally ban all flights permanently

B. To allow only military aircraft

C. To caution pilots to avoid the area during active dangerous activities

Correct Answer: C

GHOST AVIATOR

350. SAR operations may use which types of resources?

A. Only government aircraft

B. Only military ships

C. Public and private resources including aircraft, vessels, and installations

Correct Answer: C

GHOST AVIATOR

351. Initial medical assistance during SAR operations is provided

A. Only after aircraft reaches the nearest airport

B. As part of SAR functions during rescue operations

C. Only by licensed doctors onboard aircraft

Correct Answer: B

GHOST AVIATOR

Join live classes for guided practice and doubt clearing.

352. Medical evacuation under SAR refers to

A. Transporting cargo from accident sites

B. Transporting airline crew only

C. Transporting injured persons to appropriate medical facilities

Correct Answer: C

GHOST AVIATOR

353. SAR services may cooperate with which of the following?

A. Only local police

B. Only airport operator

C. Any cooperating aircraft, vessels, or installations

Correct Answer: C

GHOST AVIATOR

354. Coordination in SAR operations ensures

A. Only weather briefings are sent

B. Efficient use of resources to assist aircraft in distress

C. Only NOTAM issuance

Correct Answer: B

GHOST AVIATOR

355. Search and rescue services are established primarily to ensure

A. Cargo movement efficiency

B. Safety of aircraft and people in distress situations

C. Compliance with customs procedures

Correct Answer: B

GHOST AVIATOR

Join live classes for guided practice and doubt clearing.

356. What is the primary purpose of an Emergency Locator Transmitter (ELT)?

A. To record flight data

B. To broadcast distinctive distress signals on designated frequencies

C. To measure altitude

Correct Answer: B

GHOST AVIATOR

357. ELT can be activated

A. Only manually

B. Only automatically

C. Automatically by impact or manually by crew

Correct Answer: C

GHOST AVIATOR

358. The ELT is generally located in which part of the aircraft?

A. Cockpit

B. Fuel tank area

C. Tail section

Correct Answer: C

GHOST AVIATOR

359. The ELT cockpit control panel has which 3 positions?

A. ON, STBY, TEST

B. AUTO, TEST, FAIL

C. ON, ARM, OFF

Correct Answer: C

GHOST AVIATOR

360. At what impact force does the ELT automatically activate?

A. 1–2 g

B. 5–7 g

C. 10–12 g

Correct Answer: B

GHOST AVIATOR

361. ELT is required to undergo maintenance at what interval?

A. Every 3 months

B. Every 6 months

C. Once every 12 months

Correct Answer: C

GHOST AVIATOR

362. Accuracy of ELT on 121.5 / 243 MHz frequencies is

A. 1 km

B. 20 km

C. 100 m

Correct Answer: B

GHOST AVIATOR

363. Accuracy of a 406 MHz ELT is approximately

A. 50 km

B. 5 km

C. 1 km

Correct Answer: B

GHOST AVIATOR

364. Indian-registered ELTs begin with which identification code?

A. 406

B. 315

C. 419

Correct Answer: C

GHOST AVIATOR

365. What is the main function of the Cockpit Voice Recorder (CVR)?

A. Record flight data

B. Record radar information

C. Record audio to and from flight crew

Correct Answer: C

GHOST AVIATOR

Join live classes for guided practice and doubt clearing.

366. How many channels of audio does a CVR record?

A. 2

B. 3

C. 4

Correct Answer: C

GHOST AVIATOR

367. Which of the following is not a CVR audio channel?

A. Pilot

B. Co-pilot

C. Cabin crew

Correct Answer: C

GHOST AVIATOR

368. CVR recording duration is

A. 10 or 25 hours

B. 2 hours or 25 hours

C. 5 hours

Correct Answer: B

GHOST AVIATOR

369. What is the colour of the CVR?

A. Black

B. Blue

C. International orange or yellow

Correct Answer: C

GHOST AVIATOR

370. Why is the CVR mounted in the tail section of the aircraft?

A. Convenience

B. To reduce wiring

C. To minimise damage in case of crash

Correct Answer: C

GHOST AVIATOR

371. What is the main function of the Flight Data Recorder (FDR)?

A. Record cockpit conversations

B. Record aircraft parameters during entire flight

C. Display weather data

Correct Answer: B

GHOST AVIATOR

372. FDR is used for

A. Entertainment

B. Accident investigation & trend analysis

C. Cabin announcements

Correct Answer: B

GHOST AVIATOR

373. The FDR records

A. Last 30 minutes

B. Last 2 hours

C. Last 10 or 25 hours

Correct Answer: C

GHOST AVIATOR

374. FDR stores data on

A. Magnetic tape

B. Digital storage device

C. Paper strip

Correct Answer: B

GHOST AVIATOR

375. What is the colour of the FDR?

A. Black

B. International orange or yellow (with reflective tape)

C. Grey

Correct Answer: B

GHOST AVIATOR

376. Where is the FDR located in most aircraft?

A. Nose section

B. Wing

C. Rear of aircraft, usually under the fin

Correct Answer: C

GHOST AVIATOR

377. What is attached to the front of the FDR unit?

A. ELT

B. Anti-collision light

C. Underwater Locating Device (ULD)

Correct Answer: C

GHOST AVIATOR

378. What is the purpose of the ULD?

A. Detect weather

B. Emit underwater pings to help locate CVR/FDR

C. Display flight speed

Correct Answer: B

GHOST AVIATOR

379. Small aircraft may have CVR and FDR

A. Removed completely

B. Combined into one unit

C. Installed on wings

Correct Answer: B

GHOST AVIATOR

380. What does the term INCERFA refer to?

A. A situation requiring immediate assistance

B. Uncertainty exists regarding the safety of an aircraft

C. Aircraft under unlawful interference

Correct Answer: B

GHOST AVIATOR

381. What is ALERFA?

A. A situation where apprehension exists about the safety of an aircraft

B. Aircraft known to be safe

C. Aircraft has crashed

Correct Answer: A

GHOST AVIATOR

382. Which example corresponds to ALERFA?

A. No communication for 30 minutes

B. Aircraft in circuit fails to land within 5 minutes of expected landing time

C. Aircraft is confirmed missing

Correct Answer: B

GHOST AVIATOR

383. Which condition also leads to ALERFA?

A. Severe turbulence

B. Engine failure

C. Aircraft is known or believed to be under unlawful interference

Correct Answer: C

GHOST AVIATOR

384. What is DETRESFA?

A. A minor technical problem

B. Reasonable certainty that aircraft and occupants face grave and imminent danger

C. Loss of radar contact for 5 minutes

Correct Answer: B

GHOST AVIATOR

385. Which of the following is a DETRESFA indication?

A. Aircraft known to be under hijack

B. Failure to make communication and aircraft efficiency is impaired

C. RT failure but aircraft is maintaining normal flight

Correct Answer: B

GHOST AVIATOR

386. Which phase is most serious?

A. INCERFA

B. ALERFA

C. DETRESFA

Correct Answer: C

GHOST AVIATOR

387. Arrange the phases in increasing order of seriousness

A. DETRESFA → INCERFA → ALERFA

B. INCERFA → ALERFA → DETRESFA

C. ALERFA → INCERFA → DETRESFA

Correct Answer: B

GHOST AVIATOR

388. In “VOHS”, what does the “O” represent?

A. Operational status

B. Chennai FIR

C. Hyderabad station

Correct Answer: B

GHOST AVIATOR

389. India lies in which Aeronautical Fixed Service Routing Area (AFSRA) zone?

A. C

B. V

C. Z

Correct Answer: B

GHOST AVIATOR

390. Which of the following letters are not used as the first letter of AFSRA zones?

A. C, M, P

B. I, J, Q, X

C. A, B, D

Correct Answer: B

GHOST AVIATOR

391. How many AFSRA zones exist worldwide?

A. 10

B. 15

C. 22

Correct Answer: C

GHOST AVIATOR

392. The atmosphere is defined as

A. A layer of gases only above 50,000 ft

B. A spheroidal gaseous envelope surrounding a heavenly body

C. A thick layer of clouds around Earth

Correct Answer: B

GHOST AVIATOR

393. Atmospheric pressure is

A. Mass per unit volume

B. Weight of air per cubic meter

C. Force per unit area exerted by the atmosphere

Correct Answer: C

GHOST AVIATOR

394. Atmospheric pressure decreases with height because

A. Temperature increases with height

B. There is less air above as altitude increases

C. Humidity increases with height

Correct Answer: B

GHOST AVIATOR

395. Density is defined as

A. Force per unit area

B. Mass per unit volume

C. Temperature per unit height

Correct Answer: B

GHOST AVIATOR

396. Air density decreases when

A. Temperature decreases

B. Humidity decreases

C. Temperature increases

Correct Answer: C

GHOST AVIATOR

397. Humidity refers to

A. Pressure in unit volume

B. Temperature in unit mass

C. Weight of water vapour in a unit volume of air

Correct Answer: C

GHOST AVIATOR

398. Air with high humidity has

A. Higher density

B. Lower density

C. No effect on density

Correct Answer: B

GHOST AVIATOR

399. Which of the following affects air density?

A. Pressure

B. Temperature

C. All of the above

Correct Answer: C

GHOST AVIATOR

400. Gusting is typically a result of

A. Temperature difference only

B. Sudden local turbulence or surface friction

C. High humidity only

Correct Answer: B

GHOST AVIATOR

401. Which Q-code is used by the aircraft to ask the ground station: "What is my true bearing from you?"?

A. QDM

B. QTE

C. QDR

Correct Answer: B

GHOST AVIATOR

402. Which procedural word is used to request permission for the intended action?

A. REQUEST

B. CLEARED

C. PERMIT

Correct Answer: A

GHOST AVIATOR

403. The proword 'I SAY AGAIN' should be used when

A. The message being sent is extremely important.

B. The sender is repeating a specific part of the message for clarity.

C. The receiving station requested a repeat using 'SAY AGAIN'.

Correct Answer: B

GHOST AVIATOR

404. Which of the following is the correct radiotelephony procedure for establishing initial contact with an ATC unit?

A. Aircraft call sign, followed by the ground station call sign and current altitude.

B. Ground station call sign, followed by the aircraft call sign, then position,

C. Aircraft call sign only, followed by 'CHECKING IN'.

Correct Answer: B

GHOST AVIATOR

405. If a pilot has been instructed to 'REPORT PASSING [FIX]', what is the primary purpose of this instruction?

A. To notify the controller that the aircraft is performing a holding procedure.

B. To request permission to proceed to the next waypoint.

C. To allow the controller to confirm the aircraft's position and verify the

GHOST AVIATOR

Correct Answer: C

Join live classes for guided practice and doubt clearing.

406. What Q-code is used to request the magnetic bearing from the station to the aircraft?

A. QDM

B. QDR

C. QTE

Correct Answer: B

GHOST AVIATOR

407. If an ATC unit transmits 'SAY AGAIN', what is the pilot being requested to do?

A. Change the transmitting frequency.

B. Repeat all or part of the message.

C. Speak slower and more clearly.

GHOST AVIATOR

Correct Answer: B

408. What is the SI unit of mass?

A. Gram

B. Pound

C. Kilogram

Correct Answer: C

GHOST AVIATOR

409. Traffic information reported by aircraft is acknowledged when

A. Always

B. Requested by ATC

C. Collision risk exists

Correct Answer: C

GHOST AVIATOR

410. What is the correct response to “Report FL 60”?

A. FL 60

B. Wilco

C. Roger, reporting flight level six zero

Correct Answer: B

GHOST AVIATOR

411. What is the aerodrome control service called?

A. Mumbai Ground

B. Mumbai Dispatch

C. Mumbai Tower

Correct Answer: C

GHOST AVIATOR

412. How is 108.1 read in radiotelephony?

A. One zero eight point one

B. One hundred eight decimal one

C. One zero eight decimal one

Correct Answer: C

GHOST AVIATOR

413. What does FM stand for?

A. Field Modulation

B. Fast Modulation

C. Frequency Modulation

Correct Answer: C

GHOST AVIATOR

414. What must an aircraft do if it experiences a complete Radio Communication Failure (RCF) under IFR in VMC?

A. Climb to the highest minimum safe altitude.

B. Continue the flight in VMC, land at the nearest suitable aerodrome, and report by phone.

C. Proceed according to the last received clearance under IFR rules.

GHOST AVIATOR

Correct Answer: B

415. When setting up a radio, what step must be taken before speaking into the microphone?

A. Depress the transmit switch fully and pause briefly before speaking

B. Wait 5 seconds after keying to allow the transmitter to stabilize.

C. Check the volume level.

GHOST AVIATOR

Correct Answer: A

416. When two stations use two different frequencies for simultaneous two-way communication, this is known as

A. Simplex

B. Half Duplex

C. Full Duplex

Correct Answer: C

GHOST AVIATOR

417. The electrical unit for measuring the rate of flow of current is the

A. Volt

B. Ohm

C. Ampere

Correct Answer: C

GHOST AVIATOR

418. What is the main purpose of an Automatic Voice Announcing System (AVAS) at an aerodrome?

A. To automatically provide ATC clearances to pilots.

B. To broadcast the ATIS (Automatic Terminal Information Service) message.

C. To automatically acknowledge all pilot transmissions.

Correct Answer: B

GHOST AVIATOR

PART 2: Viva / Oral & Practical Examination

PART 2 OF 2

Technical oral Q&A · rapid-fire orals · R/T phraseology drills · full practical flight papers

GHOST AVIATOR

How the technical viva runs

The examiner fires short conceptual questions on radio principles, digital communication and procedures. Answer in one or two crisp sentences — say the definition, then one distinguishing fact. The model answers below are written in exactly that style.

Join live classes for guided practice and doubt clearing.

1. What are Linear Block Codes?

Model answer: Forward error-correcting codes in which a block of k data bits is mapped to a longer codeword of n bits (n > k) by adding parity bits formed from linear (XOR) combinations of the data. The modulo-2 sum of any two valid codewords is itself a valid codeword. They let the receiver detect and correct a limited number of bit errors (e.g. Hamming codes).

GHOST AVIATOR

2. What is Shannon Capacity?

Model answer: The theoretical maximum error-free data rate of a communication channel: $C = B \cdot \log_2(1 + S/N)$ bits per second, where B is the channel bandwidth and S/N the signal-to-noise power ratio. No coding scheme can carry information reliably above this limit.

3. What is a Matched Filter?

Model answer: A linear filter whose impulse response is the time-reversed copy of the known transmitted pulse. It maximises the signal-to-noise ratio at the sampling instant and is the optimum detector for a known signal in additive white Gaussian noise.

GHOST AVIATOR

4. What are LDPC (Low-Density Parity-Check) Codes?

Model answer: Linear error-correcting codes defined by a sparse parity-check matrix. They can approach the theoretical maximum capacity (the Shannon limit) and are decoded iteratively,

Join live classes for guided practice and doubt clearing.

giving excellent performance over noisy channels.

5. What is PCM (Pulse Code Modulation)?

Model answer: A method of representing an analogue signal digitally by sampling it at regular intervals and quantising each sample's amplitude into a binary code.

6. What is H-24?

Model answer: A notation meaning a service or facility (aerodrome, radio station, etc.) is available continuously, 24 hours a day.

7. What is Spread Spectrum?

Model answer: A technique in which the signal is deliberately transmitted over a bandwidth far wider than the minimum required, using a spreading code. It resists interference and jamming and lowers the probability of interception.

8. What is Nyquist Frequency?

Model answer: The minimum sampling rate needed to reconstruct a signal without aliasing: at least twice the highest frequency component, $f_s \geq 2 \cdot f_{txx}$.

112/121

9. What are Turbo Codes / Modes?

Join live classes for guided practice and doubt clearing.

Model answer: A high-performance class of error-correction codes using parallel concatenated convolutional encoders with interleaving and iterative decoding, achieving near-Shannon-limit performance in noisy channels.

10. How do Turbo Codes reduce ISI?

Model answer: Through iterative decoding and interleaving, which spreads bursts of errors apart in time, making the system more resilient to Inter-Symbol Interference (ISI).

GHOST AVIATOR

11. What is Quantization Error?

Model answer: The difference between the true analogue sample value and the nearest discrete level assigned to it during quantisation; it appears as quantisation noise.

12. What is Electron Density?

Model answer: The number of free electrons per unit volume in the ionosphere. It sets the refractive index of each layer and therefore the Maximum Usable Frequency (MUF) for HF sky-wave propagation.

GHOST AVIATOR

13. What is the ALOHA System?

Model answer: An early random-access protocol for shared radio/satellite channels: a station transmits whenever it has data, and if a collision occurs it waits a random time and retransmits.

14. What is PSK (Phase Shift Keying)?

Model answer: A digital modulation scheme that carries data by changing (keying) the phase of a constant-frequency, constant-amplitude carrier wave.

15. What is the International Emergency Frequency?

Model answer: 121.5 MHz (VHF) for civil aviation and 243.0 MHz (UHF) for military use; 406 MHz

GHOST AVIATOR

is used by modern ELTs for satellite alerting.

16. What is the Rayleigh Fading mechanism related to?

Model answer: Multipath propagation where there is no direct line-of-sight between transmitter and receiver, so the received signal is the sum of many reflected paths, causing rapid amplitude fluctuation (fading).

17. The Nyquist criterion is proportional to what?

GHOST AVIATOR

Model answer: To the channel bandwidth B — the maximum symbol (signalling) rate without ISI is Rs = 2B symbols per second.

113/121

18. Why do pilots switch from HF to VHF?

Model answer: VHF gives higher-quality, static-free line-of-sight communication within range of

a ground station. HF is reserved for long-range and oceanic areas beyond VHF coverage, but suffers fading and noise.

19. What is the significance when refractive index = 0?

Model answer: It marks the point at which the radio wave is completely refracted/reflected back towards Earth — effectively total internal reflection in the ionospheric layer, allowing sky-wave return.

GHOST AVIATOR

20. What is the difference between 5 MHz and 15 MHz propagation?

Model answer: The lower frequency (5 MHz) works better at night and for shorter ranges, reflecting from lower ionospheric layers; the higher frequency (15 MHz) works better by day and for long-distance skips. As a rule: higher frequency by day, lower by night.

21. What is Radio Communication Failure (7600)?

Model answer: Transponder code 7600 is selected to alert ATC that the aircraft has lost radio communication capability.

GHOST AVIATOR

22. If an aircraft reports a TCAS RA, what should ATC do?

Model answer: ATC must not attempt to modify the aircraft's flight path and shall not issue conflicting instructions until the pilot reports “Clear of Conflict.” The pilot is required to follow the Resolution Advisory in preference to any ATC clearance.

Join live classes for guided practice and doubt clearing.

23. How is “Zulu” pronounced?

Model answer: ZOO-LOO. (Z = Zulu; used for UTC time.)

24. How is altimeter setting 1009 pronounced?

Model answer: “QNH ONE ZERO ZERO NINER.” Each digit is spoken separately.

25. How is RVR 1700 pronounced?

GHOST AVIATOR

Model answer: “RVR ONE THOUSAND SEVEN HUNDRED” (metres) — commonly given as “RVR

ONE SEVEN HUNDRED” in memory reports; state the value clearly in metres.

26. What is CPDLC (system & emergency use)?

Model answer: Controller-Pilot Data Link Communications — text-based messaging between

controller and crew over a data link. In an emergency, pre-formatted MAYDAY or PAN-PAN

messages can be sent, though voice remains primary for time-critical calls.

GHOST AVIATOR

114/121

27. What is the FDR system (PCM based)?

Model answer: Flight Data Recorder. Modern recorders use Pulse Code Modulation to digitise

and store flight parameters in crash-protected solid-state memory.

28. What is the Spread Spectrum technique?

Model answer: Spreading the transmitted energy over a wide band using a pseudo-random code (Direct-Sequence or Frequency-Hopping). It provides anti-jam protection, low probability of intercept, and multiple access (CDMA).

29. What is the RCF (Radio Communication Failure) procedure?

Model answer: Squawk 7600. In VMC, continue in visual conditions and land at the nearest suitable aerodrome, reporting arrival to ATC. In IMC, continue per the last acknowledged clearance (route, level and estimate/EAT) as laid down in the rules, keep trying to re-establish contact, and observe light signals on approach.

30. How are MET reports published via AFTN (GG)?

Model answer: Meteorological messages are transmitted on the AFTN carrying the priority indicator GG (the priority reserved for meteorological traffic).

31. Explain Signal Propagation (technical).

Model answer: Radio energy reaches the receiver by three main modes: the ground/surface wave (dominant at LF/MF), the sky wave (HF, refracted by the ionosphere for beyond-horizon range), and the space or direct wave (VHF and above, essentially line-of-sight).

GHOST AVIATOR

Join live classes for guided practice and doubt clearing.

32. Explain HF propagation (detailed).

Model answer: HF sky waves are refracted by the ionospheric layers (D, E, F1, F2). Usable range

depends on the MUF and LUF, the time of day, season and sunspot activity — higher frequencies

by day, lower by night. It gives long-range/oceanic coverage but is subject to fading and a skip

(dead) zone between ground-wave and first sky-wave return.

GHOST AVIATOR

33. What is a Correlation Receiver in an AWGN channel?

Model answer: A receiver that correlates the incoming signal against stored reference waveforms

and picks the largest output. It is mathematically equivalent to the matched filter and is the

optimum detector in additive white Gaussian noise.

34. What is Duplex communication?

GHOST AVIATOR

Model answer: A system allowing simultaneous two-way communication in both directions, like

a telephone (full duplex), using separate transmit and receive frequencies.

115/121

35. What are the ATS limitations (Aerodrome & CTR)?

Model answer: Air Traffic Services are bounded by the lateral/vertical limits of the Control Zone

(CTR) and by the aerodrome's published hours of operation and available equipment/coverage.

36. What are Linear modes / linear modulation?

Model answer: Modulation in which the modulated output varies in direct (linear) proportion to the modulating signal — e.g. AM, DSB and SSB — as opposed to non-linear schemes such as FM and PM.

GHOST AVIATOR

37. Differentiate Differential PSK and Coherent PSK.

Model answer: Coherent PSK requires the receiver to recover and lock to the carrier's absolute phase reference. Differential PSK (DPSK) encodes data in the phase change between successive symbols, so no absolute phase reference is needed — simpler, at a small performance cost.

38. Differentiate Differential Entropy and Discrete Entropy.

Model answer: Discrete entropy $H = -\Sigma p \cdot \log_2 p$ measures the average information of a discrete source. Differential entropy is the analogous measure for a continuous random variable, defined by an integral over its probability density.

GHOST AVIATOR

39. A Control Zone is above the surface of: Ground / Earth / Sea?

Model answer: A Control Zone (CTR) extends upward from the surface of the Earth, which includes both land and water.

Join live classes for guided practice and doubt clearing.

⚡ Rapid-Fire Orals — Definitions, Units & Phraseology

25 Q&A

1. Abbreviation of VFR

Visual Flight Rules.

2. Meaning of AGL

Above Ground Level.

GHOST AVIATOR

3. Unit of kilogram

The kilogram is the SI unit of mass.

4. Unit of length

The metre (SI unit of length).

116/121

GHOST AVIATOR

5. Once distress is over, the station shall transmit —

The distress-cancelling message: "… CANCEL DISTRESS" / "MAYDAY … DISTRESS TRAFFIC ENDED,

SEELONCE FEENEE."

6. Full form of PIC

Pilot-in-Command.

7. VHF frequency range

30 to 300 MHz (aviation voice band 118.0–136.975 MHz).

8. HF frequency range

3 to 30 MHz.

GHOST AVIATOR

9. CPDLC full form

Controller-Pilot Data Link Communications.

10. Definition of Resistance

The opposition offered by a conductor to the flow of current, measured in ohms; R = V / I.

11. How to transmit FL200

“FLIGHT LEVEL TWO ZERO ZERO” (flight levels are spoken digit by digit).

GHOST AVIATOR

12. How to transmit Squawk 2000

“SQUAWK TWO ZERO ZERO ZERO” (transponder codes are spoken digit by digit).

13. Frequency for International Emergency

121.5 MHz (VHF).

14. Meaning of PAN-PAN (urgency)

A condition concerning the safety of the aircraft or a person on board but not requiring immediate assistance.

15. How to pronounce the distress condition

“MAYDAY MAYDAY MAYDAY” — spoken three times.

117/121

GHOST AVIATOR

16. How to pronounce Heading 045

“HEADING ZERO FOUR FIFE.”

17. Squawk code for lost communication

7600.

18. Phonetic pronunciation for letter “B”

GHOST AVIATOR

BRAVO.

19. Air-to-ground communication — which language is used?

English, or the language normally used by the ground station on the frequency.

20. Define Air-to-Ground communication

Two-way radio communication between aircraft stations and ground (aeronautical) stations.

21. What does WILCO mean?

“Understood and will comply.”

22. What is Bandwidth?

GHOST AVIATOR

The range of frequencies a signal occupies or that a channel can pass, measured in hertz (Hz).

23. SELCAL — what is it?

Selective Calling: a system that alerts a specific aircraft's crew to an incoming call using a unique

four-letter code, so they need not monitor continuously.

24. Airspace classification

ICAO Classes A to G — Class A the most restrictive controlled airspace, Class G uncontrolled.

GHOST AVIATOR

25. Current, Watt & Voltage

Current (ampere) is the rate of flow of charge; Voltage (volt) is potential difference; Power (watt) =

Voltage × Current.

118/121

🗣️ Standard R/T Phraseology Drills

5 items

Report visibility 900 m

“VISIBILITY NINER HUNDRED METRES.”

Report RVR 700 m

“RVR SEVEN HUNDRED METRES.”

GHOST AVIATOR

Use of BREAK BREAK

Spoken to separate messages to different aircraft in a very busy environment: “BREAK BREAK.”

Read back

Repeat the clearance/instruction back to ATC exactly, so it can be verified (mandatory for level, heading, speed, runway, QNH, squawk, frequency).

Transmit frequency 118.000

“ONE ONE EIGHT DECIMAL ZERO” (trailing zeros after the decimal may be omitted; state the channel clearly).

GHOST AVIATOR

✈️ Practical Flight Papers (memory-based)

3 full papers

How to use these

Each paper is a complete simulated flight the examiner talks you through — ground, departure,

climb, cruise, and an emergency. Work through every step out loud, transmitting the correct call for each phase. Flight plan, weather and airfield details are shown on screen in the real exam.

💡

119/121

Practical Paper A — Guwahati to Imphal (memory, 25 Jun 2026)

Aircraft: ATR 72 · Call sign: IGO4518 (IndiGo 4518) · Route: VEGT → VEIM · IFR

GHOST AVIATOR

1. Standard phraseology set at the start: visibility 900 m; RVR 700 m; use of “BREAK BREAK”; a

read-back; and the frequency 118.000.

2. Ground: request pushback and start-up; during pushback another aircraft is taxiing behind

you — hold/advise and take safe action; then request taxi and departure clearance.

3. Departure: holding short of RWY 20, ATC passes a previous aircraft's wind indicating a tailwind

GHOST AVIATOR

for RWY 20 — query/request the more favourable runway; read back the revised departure clearance; report ready for departure and accept the modified take-off clearance.

4. Initial climb: passing 2,600 ft Tower hands you to Approach; check in and request climb to

cruising level; Approach clears “climb FL230, report passing FL150.”

5. En-route: give a full standard position report (all ETAs provided); handle a TCAS Resolution

Advisory (“TCAS RA” … “clear of conflict”).

6. Emergency: cabin crew report unruly passengers possibly armed — transmit the MAYDAY call

for a suspected hijack and squawk 7500 as appropriate.

Practical Paper B — Nagpur to Kolkata (memory, 17 Apr 2026 afternoon)

Flight: SEJ297 (SpiceJet 297) · IFR · FL310 · B738 · Route: VANP → VILK · Endurance 04:30, POB 145

1. Phraseology meanings asked: “Let me know that you have received and understood this

message” = ACKNOWLEDGE; “Authorised to proceed under the conditions specified” =

CLEARED; “True/Accurate”; “Establish communications with …” = CONTACT.

2. Ground: pushback and start-up; taxi.

3. ATC clearance: climb on runway heading, 2,600 ft, right turn, climb FL150.

4. Line-up: birds observed on the runway — take appropriate action before take-off; then take-

off (give the after-take-off call).

Join live classes for guided practice and doubt clearing.

5. Climb: 20 NM from NNP passing FL80, report technical, request FL120; when technically clear

request further climb and set course; passing FL210 handle a TCAS RA.

6. Cruise: give a position report.

7. Emergency: standard engine fire indication — declare and divert to KKJ (Khajuraho); descend

GHOST AVIATOR

with Khajuraho.

8. Approach: ILS unserviceable, runway in sight — carry out the visual approach actions; after

landing a tyre bursts — take the appropriate actions and advise ATC.

120/121

Practical Paper C — Cochin to Mumbai (memory, 6 Apr 2026)

Aircraft: A320 · Call sign: VT-RSR · Route: VOCI → VABB · IFR · POB 159

GHOST AVIATOR

1. Weather interpretation: RVR 1200, QNH 1000, weather TSRA (thunderstorm with rain),

visibility 3000 m — read and interpret.

2. Communication: pushback & start-up; ATC clearance & taxi.

Join live classes for guided practice and doubt clearing.

3. In-flight: suspected bird strike after departure with all parameters normal — continue as per

flight plan with a normal call; request further climb from Cochin Approach; give a position

report.

4. Abnormal: starboard engine vibration — return to Cochin; make a PAN-PAN call.

5. Emergency: starboard engine fire at 30 DME inbound Cochin — make a MAYDAY call.

Passing strategy

Drill Part 1 by section until you are consistently above 80% in each, then sit the whole set as one

timed paper. For Part 2, rehearse the technical answers aloud and fly each practical paper end-

to-end so the phraseology becomes automatic. The practical is where most candidates are failed

— fluency, not memorisation, carries it.
